// 2026 STRATEGY: POWERSHELL, TYPESCRIPT, AND RPA ARCHITECTURE

CHOOSE BY AUTOMATION LAYER, NOT BY LANGUAGE PREFERENCE

> *The right decision is not one standard tool, but one standard selection model. Use PowerShell for the OS, TypeScript for the platform, and RPA for legacy gaps.*

PROJECTED RPA CAGR (2026-33)

29.0%

TS ENTERPRISE USAGE

40%

// STRATEGIC_TRANSFORMATION

PROBLEM: ONE STANDARD CREATES WRONG TRADEOFFS

> *A single-tool strategy increases automation debt*

JAVASCRIPT-ONLY USERS (2025)	RPA MARKET 2024
6%	*$3.6B*

STRATEGIC_EXECUTION_MATRIX

01 PowerShell overreach: Using scripts for API-heavy products creates maintainability problems.

02 TypeScript overreach: Using cloud stacks for simple file operations adds unnecessary overhead.

03 RPA overreach: Using bots where APIs exist creates brittle and expensive automation.

04 Overstandardization causes teams to use strong tools in weak-fit situations.

// STRATEGIC_TRANSFORMATION

SOLUTION #1: POWERSHELL FOR THE OPERATING SYSTEM

> *Best fit for file handling and shell execution*

BASE VERSION	LTS SUPPORT
.NET 9	*Nov 2026*

STRATEGIC_EXECUTION_MATRIX

01 Default choice for OS-level automation, file ingestion, and validation.

02 Handles rename/move/archive operations and scheduled batch jobs natively.

03 Ideal for server administration and shell command orchestration.

04 PowerShell 7.5 focus: Quality, security, and stability of the platform.

// STRATEGIC_TRANSFORMATION

SOLUTION #2: TYPESCRIPT FOR THE PLATFORM

> *Best fit for BTP extensions and modern integration logic*

TS USAGE (2025)	BASELINE (2022)
40%	28%

STRATEGIC_EXECUTION_MATRIX

01 Strategic choice for SAP BTP, CAP services, and API-driven workflows.

02 Ideal for maintainable multi-developer codebases and event handling.

03 Native support for Node.js service layers and UI extension components.

04 TypeScript has become the preferred mode for enterprise-scale engineering.

// STRATEGIC_TRANSFORMATION

SOLUTION #3: RPA AS THE NECESSARY BRIDGE

> *Use only when screens are the only available interface*

RPA MARKET (2033)	MARKET GROWTH
$35.84B	*14.5%*

STRATEGIC_EXECUTION_MATRIX

01 Justified when no stable API exists and legacy apps cannot be changed.

02 Acts as a bridge for GUI-only workflows to modern downstream systems.

03 Market demand remains high due to persistent legacy interface gaps.

04 Evolving from simple screen scraping to governed automation platforms.

// STRATEGIC_TRANSFORMATION

OPERATING MODEL: API FIRST, SCRIPT SECOND, RPA LAST

> *A practical decision tree for enterprise teams*

PROJECTED CAGR	ARCHITECTURE LAYERS
29.0%	6 Levels

STRATEGIC_EXECUTION_MATRIX

01 Priority 1: If stable API/Event exists, use JavaScript/TypeScript on BTP.

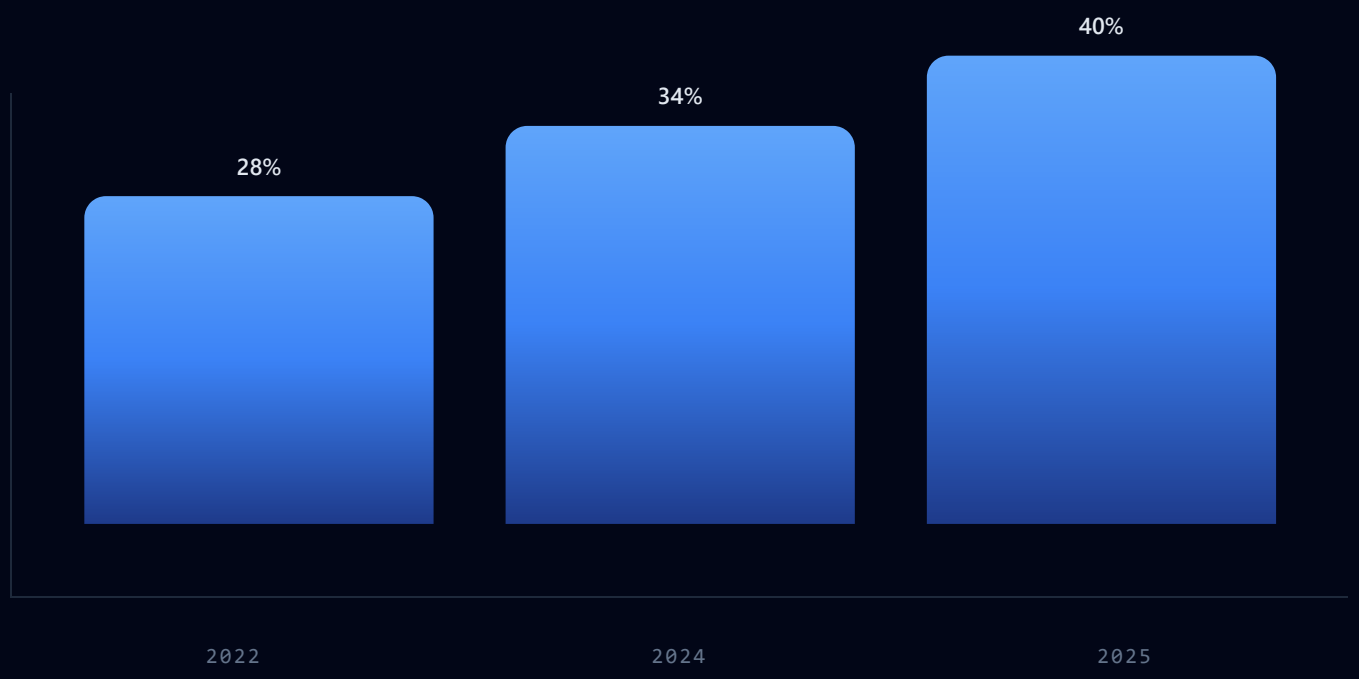
02 Priority 2: If primarily an OS/file/system task, use PowerShell.

03 Priority 3: If only interface is a GUI, use governed Enterprise RPA.

04 A repeatable sequence prevents subjective and brittle tooling debates.

MARKET EVIDENCE: TYPESCRIPT DOMINANCE

Exclusive usage continues to rise in modern work



MARKET EVIDENCE: RPA STILL GROWING

Expansion remains real as categories evolve

"For this release the focus has been on quality, security and stability of the platform."

JASON HELMICK

SENIOR PRODUCT MANAGER, POWERSHELL TEAM // STRATEGIC

FINAL RECOMMENDATION: THREE TIERS, THREE OWNERS

- >> PowerShell: Operates the estate (Files, Admin, Jobs). Owned by IT Ops.
- >> JavaScript/TypeScript: Extends the platform (BTP, APIs). Owned by Engineering.
- >> Enterprise RPA: Bridges the legacy gap (GUI-only). Owned by Automation CoE.
- >> Policy: Standardize the decision model, not a single language.
- >> KPI: Target 80%+ VBScript retirement by the end of 2026.

RETIREMENT TARGET

80%+

ACTION PRIORITY
