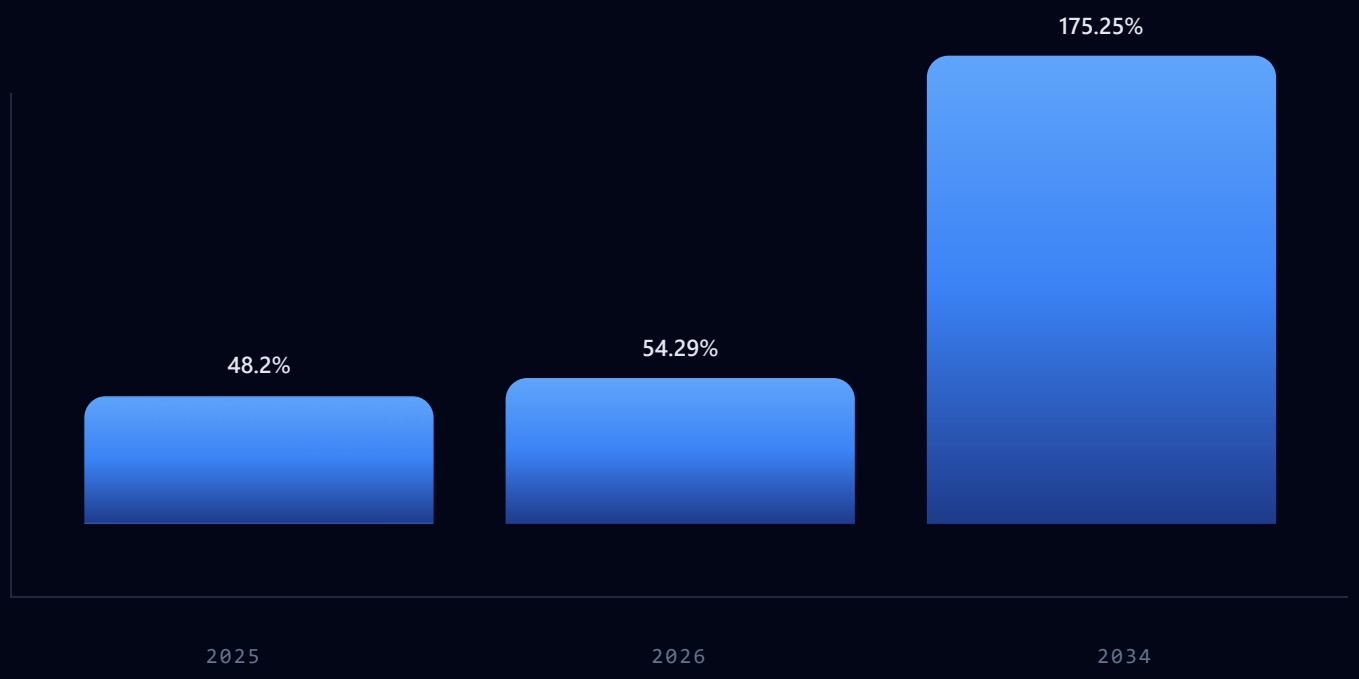
JAPAN SEMICONDUCTOR MARKET RE-ACCELERATES

A larger domestic market creates stronger pull for TDSC



// STRATEGIC_TRANSFORMATION

STRATEGIC SHOCK: TOSHIBA–ROHM–MITSUBISHI INTEGRATION

> *Structural realignment to build global scale*

PARTIES INVOLVED	MOU DATE
3 Core Cos	*Mar 27, 2026*

STRATEGIC_EXECUTION_MATRIX

01 March 2026: MoU signed for discussions on integrating semiconductor/power-device businesses.

02 Parties: TDSC, ROHM, Mitsubishi Electric, and investment partners (JIP/TBJ).

03 Objective: Creating a technology foundation capable of competing in the global market.

04 Shift from fragmented domestic capability to an integrated national-scale platform.

// STRATEGIC_TRANSFORMATION

POWER SEMICONDUCTORS: SI, SIC, AND GAN EXPANSION

Spanning EVs, Data Centers, and Infrastructure

SERVER PSU DESIGN
3kW

TECH FAMILIES
Si/SiC/GaN

STRATEGIC_EXECUTION_MATRIX

01 Automotive: SiC die and modules in 750V and 1200V classes for EV drivetrains.

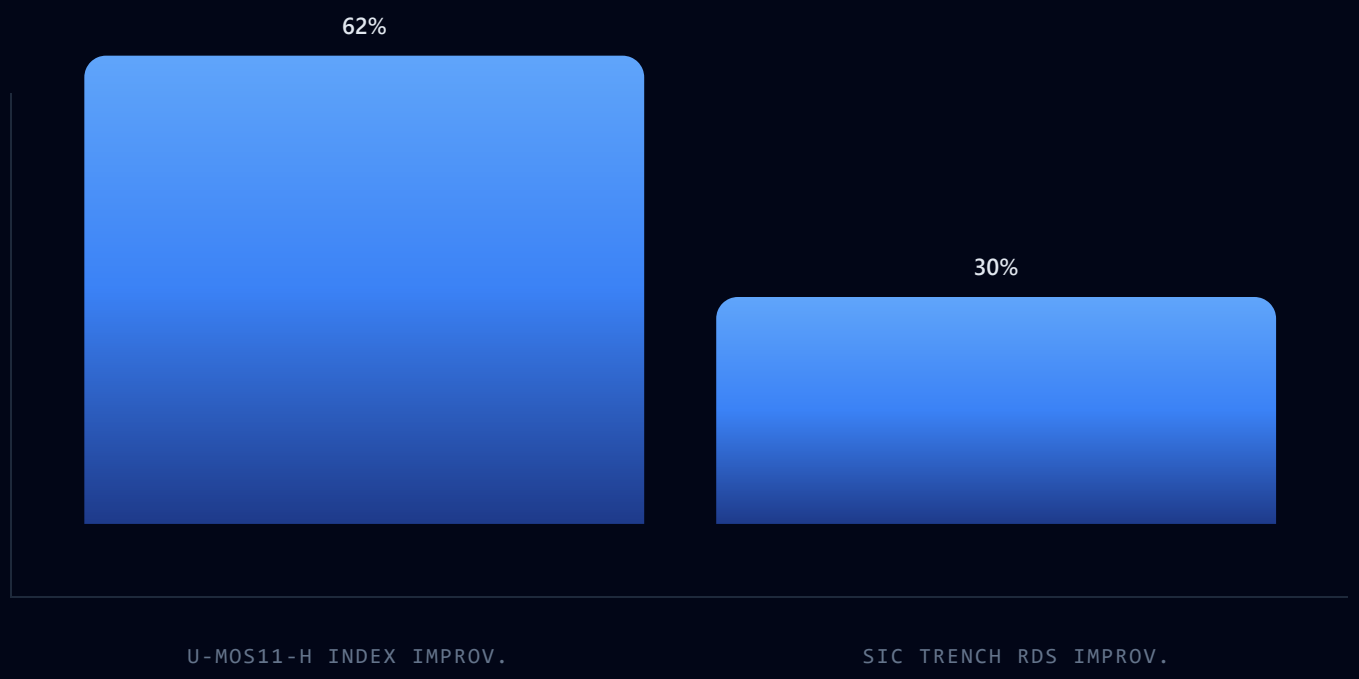
02 Data Centers: High-efficiency 3kW PSU reference designs using GaN/SiC FETs.

03 Industrial: Next-generation motor-control and UMOS 11 MOSFET families.

04 Infrastructure: High-voltage protection and isolation devices for grid-level systems.

EFFICIENCY PROOF: NEXT-GEN MOSFET & SIC PERFORMANCE

Measurable R&D performance improvements in 2026



// STRATEGIC_TRANSFORMATION

STRATEGIC DEMAND POOLS: AUTOMOTIVE & DATA CENTERS

> *Alignment with Japan's fastest-growing use cases*

NETWORKING SHARE
32.7%

PRIORITY POOLS
Auto/AI-DC

STRATEGIC_EXECUTION_MATRIX

01 Automotive: Strong pull from EV drivetrain inverters, ADAS, and body electronics.

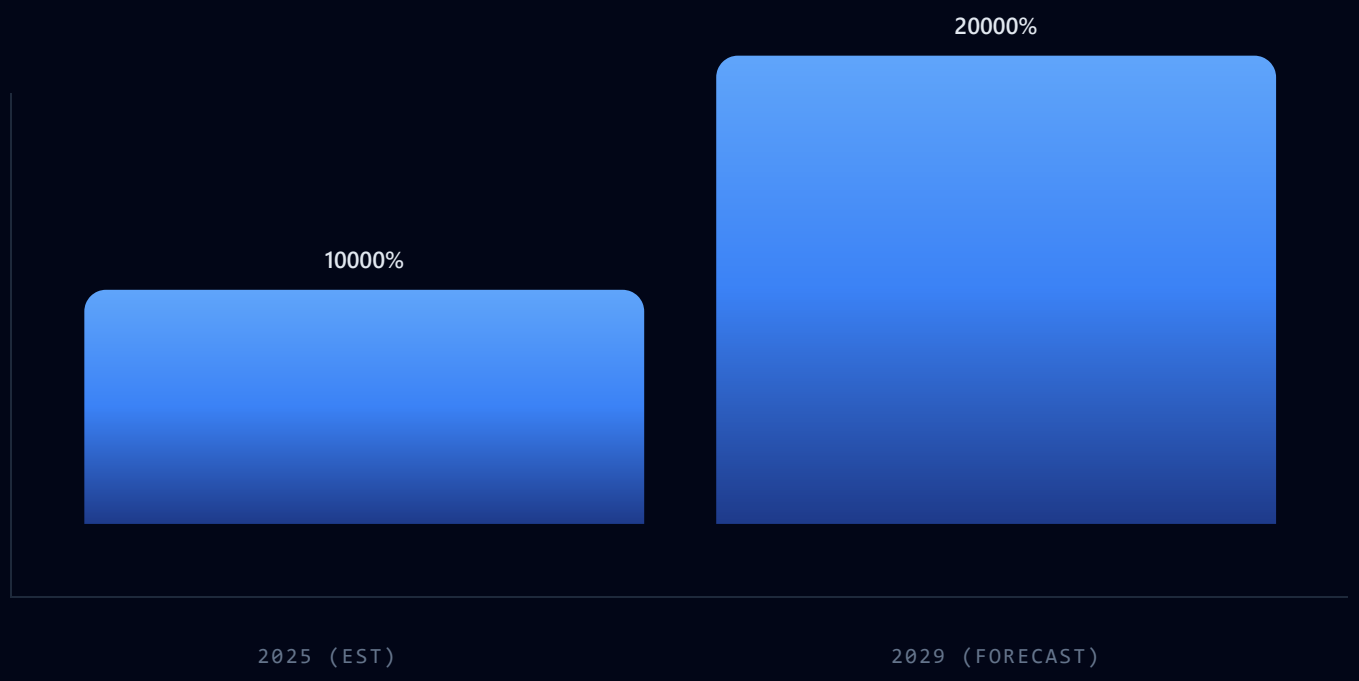
02 Data Centers: Critical demand for power efficiency in AI servers and thermal management.

03 Networking: 5G base stations and DC-DC converters account for 32.7% application share.

04 Industrial: Expansion in motor drives and high-precision automation controls.

STORAGE TREND: AI WORKLOADS KEEP HDDS STRATEGIC

Benefiting from AI-era capacity pressure



// STRATEGIC_TRANSFORMATION

COMPETITIVE LANDSCAPE: MAJOR JAPANESE PLAYERS

> *Toshiba's position in the domestic semiconductor ecosystem*

MAJOR PLAYERS
7 Companies

CONSOLIDATION ROLE
Strategic Core

STRATEGIC_EXECUTION_MATRIX

01 Discrete/Logic/Analog: TDSC remains a global leader in power and storage.

02 Memory: Kioxia (NAND) remains a key related player.

03 Consolidation Group: Integration talks with ROHM and Mitsubishi Electric create a new power-giant.

04 Other Peers: Sony (Image sensors), Renesas (MCUs), Murata (Components).

"For Toshiba and its partners, these trends present both significant opportunities and challenges as the industry adapts to the new era of data growth."

SENIOR MANAGER, HDD BUSINESS DEVELOPMENT // STRATEGIC

2026 STRATEGIC TAKEAWAYS FOR TDSC JAPAN

- >> Consolidation is the headline: Moving toward a national power-semiconductor champion.
- >> Scale Advantage: Tapping into a Japan market growing at 15.8% CAGR.
- >> Efficiency Lead: Technical proof shows 30-62% performance gains in SiC/MOSFET.
- >> Storage Resurgence: AI infrastructure demand doubles the HDD/SSD capacity requirement.
- >> Strategic Play: Focus on 'integrated competitiveness' rather than isolated device sales.
